

RTP2800/2900 O2 Sensor Kit

Part number: 638-094769-005

esl 
service is solution

- Plug and Play design
- Included high quality pump
- Including 6 months warranty
- Little configuration changes needed
- Fast process implementation
- Immediately available

ESL introduces a fully independent O₂ Sensor unit. Built with high quality components made in Germany, the unit comes with all needed connections for a quick installation. Setup for plug and play use, only very little facility adjustments need to be made.

All connections the unit needs are already given within RTP2800 or RTP2900 tools. The Sensor Unit will be connected to your tool interface, ppm O₂ level and valve status will be displayed for your information or process tracking. Installation and setup can be done from our experienced maintenance personnel.

- **Tool Models affected**

MATTSON RTP 2800/2900/3000

- **High quality parts only**

- **Easy installation**

No separate facility connections have to be made; The unit requires 24VDC, 5VDC and Nitrogen. Setup of the system software can be done easily and quickly with a manual or through our field service engineers.
